

Airport Opportunities Study: Abbotsford International Airport

Issue

The City of Abbotsford required an assessment of potential long term development opportunities and land uses necessary to create a truly international airport in Abbotsford.

Innovation

Planning and Management Solution TyPlan Consulting Ltd. benchmarked other Canadian and American airports assessing airport master plans and identified trends and land use types being developed to support and enhance current airport operations. The concept of "Aerotropolis" was used as a foundation to identify potential long term land use patterns and land use types that could facilitate expanded growth at the Abbotsford International Airport.

Solution

TyPlan identified types of land uses, land use patterns, and related area requirements evident at other international airports to assist Abbotsford in identifying a long term planning direction.
