

## Run of River Power

### Issue

Run of River Power retained TyPlan Consulting to determine the economic benefits associated with the development of seven independent hydro electric facilities in the Pitt River Watershed. Utilizing the British Columbia Input Output Model (“BCIOM”), an econometric model, project benefits were determined as follows:

- Federal and Provincial taxes;
- Contribution to gross domestic product at a factor cost; and,
- Employment by sector of the economy in person.

### Innovation

The results of the review were utilized in the preparation of the environmental impact assessment.

### Solution

The review provided an indication of the provincial and federal benefits associated with this project.
